# RE-THINK BROADBAND

**You think your business is unable to get a cost effective Managed Broadband Internet Service?**

## THINK AGAIN.

For a start, **EVERYTHING** about Aramiska's Managed Broadband service is designed to ensure your business enjoys reliability, full security, value for money and outstanding performance as standard.

Our service packages are designed to support your business, whether you are a small business or a large multi-site enterprise. Our priority is to assure **EVERYONE** can work more efficiently and connects directly onto the Internet from any office location in Europe.

Aramiska's unique broadband solution is based on the latest two-way open standard satellite technology, which means there are no geographic restrictions to the service availability and this means our broadband service really is available **EVERYWHERE**.

With our dedicated customer services offering freephone business support available 24x7, and our network delivering unrivalled reliability, you can be sure Aramiska will meet your business broadband needs **EVERYTIME**.

# THINK ARAMISKA

# ARAMISKA THE NUMBER ONE ALTERNATIVE FOR BUSINESS BROADBAND

## BROADBAND ACCESS

### *Connects your offices across Europe*

Aramiska's services enable you to connect your offices across Europe to the Internet or Intranet. There is no need to do line tests, postal code or telephone checks. Aramiska's technology allows businesses to enjoy two way high-speed access by satellite.

### *Low cost of ownership*

The Managed Broadband Internet Service includes Broadband Access, Business Internet, Security features, hardware, customer service and maintenance in one fixed monthly fee. The fee includes support for an unlimited number of PCs in your network.

### *Straightforward installation*

The equipment required to enjoy the Aramiska services consists of the Aramiska Arc, the satellite modem, plus a discrete 75 cm satellite dish that connects to any network and does not require the configuration of PCs. Therefore the installation process, done by certified Aramiska Partners, is straightforward and non-disruptive.

### *Guaranteed speeds*

The DVB-RCS open standard enables Aramiska to provide specific speed characteristics to every package offered. Aramiska offers you a contention ratio of 4 to 1 for upstream speeds and 8 to 1 for downstream speeds. Aramiska is therefore uniquely positioned to offer a minimum guaranteed speed for every service package.

### *Fast surfing*

The ARC cache is used to quickly retrieve pages from recently accessed websites locally on the Aramiska Arc. State of the art pre-fetching technology is implemented to speed up the retrieval of websites that are not stored in the ARC cache. Both features ensure a fast surfing experience and consistent speed availability.

## BUSINESS INTERNET

### *Business flexibility*

You can transfer an unlimited amount of data (within the limits of our Fair User Policy) and connect an unlimited number of PCs on your network to the Internet. This brings ultimate flexibility to your enterprise through one single connection.

### *Aramiska mail server*

An important part of the Aramiska Mail Server is a very simple and efficient email administration interface. You can create an unlimited number of email addresses, set up mail groups, and assign members to groups within seconds. Employees on the road or working from home can get their mail remotely from the Aramiska Mail Server as well.

### *Service level monitoring*

Since Aramiska operates its own end-to-end network we are able to provide customers with service level reports on a regular basis. In addition you can monitor visited websites and when they were visited on the Aramiska Arc.

### *Storage facility*

Included in the offering is a file storage facility. This provides full functionality for the sharing of files and folders. It can store up to 20 GB of data for an unlimited number of users and groups.

Visit <http://www.aramiska.com> for more information.

03.ARA.02612.01.EN © Aramiska™ - October 2003.

### *Domain name and web hosting*

Web hosting up to 100 MB in our Internet Data Centre is included in the Aramiska service. Aramiska provides customers with one .co.uk, .com or .net domain name and domain name transfer for free.

### *Around the clock support*

Aramiska offers you an around the clock multilingual dedicated customer support service, without extra costs by using the free telephone number. Aramiska's Internet Centre monitors and controls the complete access network 24 hours per day, 365 days a year. This ensures we can provide a reliable network and service availability of 99.7%.

## NETWORK SECURITY

### *End-to-end monitoring*

The Aramiska Internet Centre, Network Operations and Customer Services operate from a single location. Aramiska controls the end-to-end connection, which allows us to constantly monitor the network and offer you a reliable and secure connection. There are no third parties involved.

### *Firewalls*

Firewalls at the Aramiska Internet Centre and the customer site prevent security violations.

### *Network Address Translation*

Network Address Translations (NAT) allows PCs on the network to connect to the Internet without the need for a public IP address. It also provides extra security as the IP address of the PC is inaccessible from the Internet. Customers can set up a port forwarding feature which enables the use of servers and applications requiring a public IP address.

### *Virus scanner*

The Virus Scanner alerts and prevents viruses entering and/or leaving your network. Even internal mail is scanned. The scanner functions together with the Aramiska mail server on the Aramiska Arc box. The virus definitions are updated automatically and therefore no administrator or user intervention is required.

### *VPN enabled network*

The Aramiska network allows you to set up your own secure connection through the use of virtual private networking. You can use Point-to-Point Tunneling Protocol (PPTP) and transparent IP-sec for this purpose, enabled in the firewall.

*Aramiska Certified Agent*
